

Supplier Scraper

Step-by-step setup guide for new installations

What you need before starting

- A Gmail account to send emails from
- Your Google Places API key (provided by Schion)
- The zip file: `supplier_scraper_v1.0.0.zip`

Step 1 - Extract the zip

Right-click the zip file -> Extract All -> extract to a folder you will keep.

Example: `C:\SupplierScraper\`

After extracting you should see:

```
supplier_scraper.exe
config.ini
README.md
```

Step 2 - Create a Gmail App Password

Skip this step if Schion has provided you a pre-filled config.ini.

Your Gmail needs an App Password - a special code so the app can send emails on your behalf.

1. Go to: `myaccount.google.com/apppasswords`
(You must have 2-Step Verification enabled. If not, enable it first at `myaccount.google.com/security`)
2. App name: type `Supplier Scraper` -> click `Create`
3. Copy the 16-character code shown (e.g. `abcd efgh ijkl mnop`)
Save it - it only shows once.

Step 3 - Run setup

Double-click `supplier_scraper.exe` - a black terminal window opens.

Type the following and press Enter:

```
setup
```

Follow the prompts:

Prompt	What to enter
Google Places API Key	Provided by Schion
SMTP host	smtp.gmail.com (press Enter for default)
Your email address	Your Gmail address
Password	The 16-character App Password from Step 2
Sender display name	Noaman Alam (press Enter for default)

Step 4 - Open the dashboard

Double-click `supplier_scraper.exe` again, type the following and press Enter:

```
serve
```

Then open your web browser and go to:

```
http://localhost:8080
```

The dashboard is now running. Keep the terminal window open while you use it.

Step 5 - Daily workflow

Page	What to do
Scrape	Pick a city and click Scrape to find new companies
Contacts	Review results, click Approve on companies to contact
Send Emails	Click Send Campaign to email all approved contacts
Logs	See who was sent, who bounced

Troubleshooting

Problem	Fix
SMTP credentials not configured	Re-run setup and enter your email + App Password
Emails not sending	Make sure you used the App Password, not your regular Gmail password
Dashboard won't open	Keep the terminal window open (must show 'Uvicorn running')
Black window closes instantly	Right-click <code>supplier_scraper.exe</code> -> Run as Administrator

Getting updates

When a new version is available, a yellow banner will appear at the top of the dashboard with a download link.

Download the new .exe and replace the old one in your folder. Your data and settings stay the same.
